use of discriminant analysis pdf

Linear discriminant analysis (LDA), normal discriminant analysis (NDA), or discriminant function analysis is a generalization of Fisher's linear discriminant, a method used in statistics, pattern recognition and machine learning to find a linear combination of features that characterizes or separates two or more classes of objects or events.

This article describes how to use the Fisher Linear Discriminant Analysis module in Azure Machine Learning Studio, to create a new feature dataset that captures the combination of features that best separates two or more classes. This method is often used for dimensionality reduction, because it

Principal component analysis is a statistical technique that is used to analyze the interrelationships among a large number of variables and to explain these variables in terms of a smaller number of variables, called principal components, with a minimum loss of information.
